## Indoor Gardening Herbs and Vegetables Pocket Guide

### VEGETABLE

#### Tomatoes

"Window-sill" tomatoes are smaller than outdoor varieties, but they taste delicious! These do well in 6-inch pots filled with good potting soil. Fertilize regularly but lightly. Water thoroughly, but not too frequently.

- Direct sunlight
- Soil mix kept moist
- 75°-85°

### VEGETABLE

#### Green Onions

Green onions, aka scallions, can be easily grown by placing their roots in a glass of water in front of a sunny window. Cut off the tops for cooking; green onions are full of vitamins A and C, iron, calcium and fiber.

- Direct sunlight
- Fertilizer mix or water alone
- 68°-77°

### VEGETABLE

#### Radishes

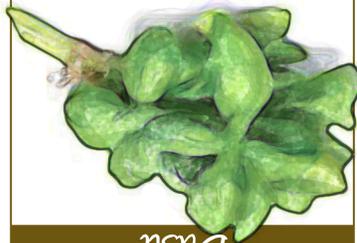

Radishes love sunlight, cool soil and lots of moisture with good drainage. Small radish varieties grow best indoors; they need plenty of room for their roots to grow. Daikon radishes should stick to outdoor gardens.

- Direct sunlight
- Loose, well-drained soil
- 50°-75°

### HERB

#### Basil

Basil is easy to care for and likes lots of sunlight and warmth. When growing basil indoors, use organic fertilizer. Pots should have good drainage and pH levels should stay between 6.0 and 7.5.

- Lots of light
- Rich, well drained soil
- 55°-70°

### HERB

#### Mint

Mint is an easy plant to grow indoors, whether in soil or in a bottle of water. Mint plants should be kept moist but not too wet. Rotate mint plants every 3-4 days, as they bend towards the sunlight.

- Indirect light
- Potting mix
- 55°-70°

### HERB

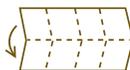

#### Rosemary

Gradually wean rosemary off of sunlight outdoors first, then keep it inside near your brightest window. Only water when the top of the soil is dry to the touch and never let it dry out completely.

- Bright light or fluorescent
- Light, fast draining soil
- 50°-80°

1. Cut along outer black line.

2. Fold in half lengthwise

3. Fold along each dotted line

4. Fold cover closed. Place wallet for quick reference
